Hi Keith,

OES has reviewed the edited subject noise analysis and has no further comments. I will upload a copy of this correspondence to EnviroNet as approval.

Thanks,
Caraline

Caraline,

Stantec has addressed your comments on the noise study for the subject project. It is uploaded for your review.

Thanx,

Keith

Hi Keith,

You should have received notification that the document was revised and reuploaded to EnviroNet.

To address Caraline's comment, the following changes were made:

Footnotes were added to Section 4.1 (Receptor Identification) and to Appendix A (Receptor 33.01) specifying that an Equivalent Receptor calculation was performed only for the Activity Category C receptors where a noise impact is predicted and structural noise abatement is found to be acoustically feasible (references to Section 8.3 – "Structural Noise Abatement Measures Considered").

We had a quick discussion with Caraline, and she agreed with this proposed revision.

Thanks!
Christine

Hi Keith,

I have reviewed the NHX Noise Analysis. The only comment I have is I am not seeing any equivalent receptor calculations for the Category C locations. I see in the tables where they are all listed, but there should be calculations showing how they came to those numbers. Example below:
